

About Photovoltaic (PV) Solar Panels

1. All solar panels use the energy from sunlight.

2. There are 2 types of solar panel:
Those that use sunlight to heat water.
Those that use sunlight to produce electricity.

3. Solar panels that heat water do not produce electricity.

4. 'Solar water heating panels' (or 'solar water heating tubes') heat water.

5. 'Photovoltaic (PV) Solar panels' produce electricity.

6. York solar energy install and maintain PV solar panels.

7. PV solar cells make PV solar panels make PV solar arrays.
 - a. PV solar panels are an assembly of PV solar cells.
 - b. PV solar arrays are an assembly of PV solar panels.

9. PV solar panels are what you see on the side of satellites, or the space shuttle.
 - a. PV solar panels are the wing like structure.
